INT.CL. : H01R 17/04 H01R 17/12

TITLE : COAXIAL CONNECTOR

ABSTRACT : PROBLEM TO BE SOLVED: To provide a coaxial connector in which secure and stable contact continuity can be provided, and in which sufficient compactness and thinness can be achieved.

SOLUTION: A coaxial receptacle 1 is composed of an insulation case 2 of synthetic resin in a rectangular parallelepiped form, inner terminals of a fixed terminal 4 of metal disposed in a recessed part (inner space) 3 in the insulation case 2, and a movable terminal 5 of metal having a spring property, a rubber-like elastic body 51 disposed under the movable terminal 5 in the recessed part 3 in the insulation case 2, and an external terminal (outer conductor) 40 disposed to cover a main part of the insulation case 2. The recessed part 3 in the insulation case 2 is a space of a standing column-like form, it is circularly opened on the upper side as an introducing port 7, and a center contact of a counter coaxial connector invades from the introducing port 7 downward.
